

# Research Area of Biology Study Program, FST UIN Jakarta

---

## 1. Introduction

Indonesia as a Megabiodevirsity in Asia, has the potential in their tropical natural resources that can aspire with the dreams, hope, and goals in achieving Sustainable Development Goals (SDGs). With the potential in mind and the uniqueness in the Department of Biology, Faculty of Science and Technology of UIN Jakarta, that can distinguished integrity of Knowledge in the mean to give chances to develop in research with the many theme as the environmental sciences that consists of the biological, ecological, and conservation point. Beside that, the other theme are Animal biosciences, Plant biosciences, and Microbiology. The field of research that are being developed in the Department of Biology, Faculty of Science and Technology of UIN Jakarta are in one with the Islamic values and Moral values that are based with Visi Misi Consortium Biology Indonesia (KOBI), which in the year 2022 declared the main vision as to increase the score of Index Biodiversity of Indonesia (IBI) in the future. Beside that with the helps of the Science in the Biology World, it is in hope that the Department of Biology, Faculty of Science and Technology of UIN Jakarta can achieve the Research Roadmap of Biology department with consistency and global competitiveness.

## 2. Research Area (Kajian Penelitian)

### 2.1. Environmental Sains (Environmental Biology, Ecology of Change and Conservation)

Area Environmental Science research conducts research in the field of environmental science, including Basic Ecology, Change Ecology and Conservation through an interdisciplinary approach (marine biology, terrestrial ecology, environmental impact assessment, natural resource management and dynamics of ecosystem change). The results of environmental area research are expected to support the achievement of the Sustainable Development Goals (SDGs),

Researcher:

Prof. Dr. Lily Surayya Eka Putri, M.Env.Stud (Environmental Biology}

Associate Prof.Dr. Agus Salim, S.Ag,M.Si (Ecology of Change)

Ir.Etyn Yunita, M.Si (Conservation)

Dr. Saifuddin, M.Pd.i (Knowledge Integration)

### 2.2. Biosains on Animal

Research in the area of Animal Biosciences conducts research in the field of animals through an interdisciplinary approach (taxonomy, molecular biology, physiology, ecology and ethnozoology). Researchers in the Animal Biosciences Research group collaborate and manage studies to explain scientific problems related to animal biosystematics, aspects of ecology and animal biological functions. The results of this

research are expected to play a role in the management of animal diversity in supporting utilization

Researcher :

Associate Prof.Dr. Fahma Wijayanti (Animal Ecology}

Dr. Bhintarti (Animal Biomolecular)

Narti Fitriana, M.Si (Animal Systematics)

Fahri Fahrudin, M.Si (Animal Physiology)

### **2.3.Plant Biosains**

Plant bioscience of research area conducts research in the field of plants through an interdisciplinary approach (systematics, molecular biology, physiology, ecology and ethnobotany). Researchers in this area research cooperate in managing research and development. Biological natural resources in the tropics are the object of plant research. The results of research in this field are expected to play a role in the utilization and management of plant biological resources to support the context.

Researcher: Associate Prof. Dr. Dasumiati, M.Si. (Plant Physiology)

Associate Prof. Dr. Priyanti, M.Si. (Plant Systematic)

Ardian Khairiah, M.Si. (Etnobotani)

### **2.4.Microbiology**

Microbiology research includes microbes of bacteria, fungi, microalgae, and microscopic protozoa and viruses. These microorganisms have a very important role in the survival of life on this earth. Therefore, we need to explore and potential microorganisms in nature. Microbiological applications for various fields of industry, agriculture, environment, food, mining and health. Research in microbiology includes areas such as identification and characteristics

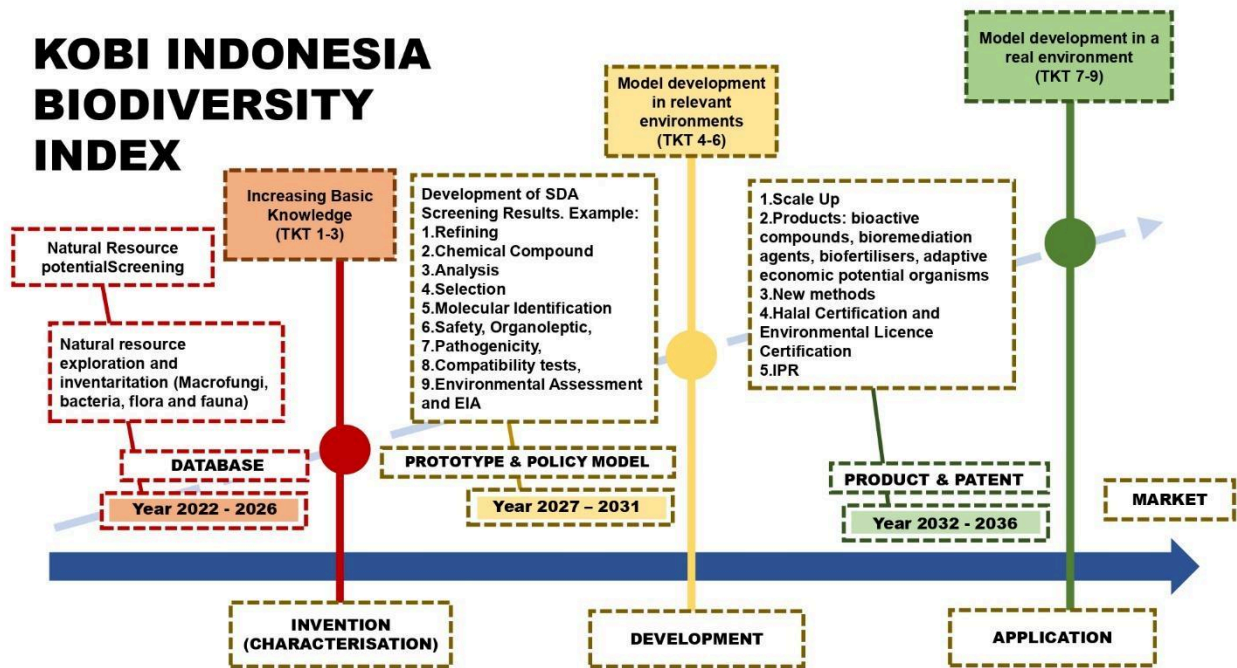

Researcher :

Prof. Dr. Megga RatnasariPikoli, M.Si (Environmental Microbiology}

Associate Prof. Dr. Nani Radiastuti, MSi (Mycology)

Arina Findosari, M.Si (Bacteriology)

### 3. Research Roadmap /Peta Jalan Penelitian

Research Roadmap of Biology Study Program UIN Jakarta (2022-2036)

Note:

#### Stage 1. 2022-2026

1. Exploration and Inventory of Natural Resources (microbial fungi, bacteria, flora, and fauna)  
Example:
  - 1.1. Species Diversity
  - 1.2. Habitat assessment and distribution of tropical fauna
  - 1.3. Environmental Impact Assessment of Natural Resources Exploration and Inventory Activities

2. Screening of Natural resource potential;  
Example:
  - 2.1. Microbial screening potential remediation (ex tin mine),
  - 2.2. Screening of potential plants producing secondary metabolites and ethnobotanical knowledge
  - 2.3. Screening of potential economic animals
  - 2.4. Screening (Risk Assessment / Risk Analysis) Natural Resources Utilization Activities

Output Stage 1 DATABASE

#### STAGE 2. 2027-2031

## 1. Development of Natural Resources Screening Results

Example:

1.1. Purification

1.2. Chemical Compound Analysis

1.3. Selection

1.4. Molecular Identification

1.5. Safety Test, Organoleptic, Pathogenicity, Compatibility,

1.6. Environmental Assessment and Amdal

Output Stage 2. PROTOTYPE & Policy

### Stage 3. 2032-2036

1. Scale Up Scale
2. Products in the form of: bioactive compounds, bioremediation agents, biofertilizers, adaptive economic potential organisms
3. New methods
4. Halal Certification and Environmental Licensing Certification HKI

Output Stage 3: Product & Patent
